

TABLE OF CONTENTS

CHAPTER 1: What are We Looking For and Why?	1
The Industry's Emerging Direction	4
Mold's Emerging Importance	5
Legislation	5
This Book's Role	6
CHAPTER 2: Mold – What is it and Why is it such a Big Deal?	9
A Biology Lesson	10
What is Mold?	10
Factors that Affect the Growth of Fungi	11
Structure	12
Spores	12
Hyphae	13
Mycelium	14
Stages of Growth	14
Travel/Transport of Spores	15
The Naming of Fungi	15
The Role of Fungi	15
How do Fungi Compare to Bacteria and Viruses?	16
Bacteria	16
Viruses	16
Fungi in Buildings	17
Ascomycetes	17
Basidiomycetes	17
Deuteromycetes (fungi imperfecti)	17
Zygomycetes	18
Toxicity	18
Dosage and Susceptibility	19
Allergens	19
Testing Methods to Determine the Potential for Allergen and/or Toxin Exposures	20
Pre-existing Conditions	21
Pathogens	22
CHAPTER 3: What is Your Role on the TEAM?	25
What is a Team?	25
How Big a Team do you Need for a Project?	25
Hazards/Risks Involved in the Project	25
What do Team Members Bring to the Project?	26
Perspective	26
Knowledge	27
Certification	27
Experience	28
Responsibility	28
Business laws	29
Certification	30
Licensing	30
Registration	31
Judgment	31
Bias Based on Financial Interests	31
So Who Should be on the Team?	31
Cross Training	35
Factors Limiting the Scope of IAQ Work	35
The Role of IAQ Practitioners – Example Situations	35
A Large Mold Infestation	35
Small Mold Growth Issue	36
The Role of IAQ Practitioners – Summary	37
CHAPTER 4: Finding Mold	39
Initial Contact	39
Precautions Before We Start	39
Investigation	41
Walkthrough	42
Visual Observation	43
Measurements – Indicators – Assessing the Building	52

Finding Hidden Mold	54
Guidelines	54
Air Samples	55
Surface Samples	55
Wall Samples: Sampling the air of the cavity or interstitial space in walls	55
Swab Samples	56
Destructive Testing	56
Assessing HVAC Systems	59
Data Analysis	59
Testing/sampling	59
Procedures	59
Instrumentation	60
Thermometers	62
Humidity Meters	62
CO ₂ Meters	62
Pressurization Meters	63
Moisture Meters	63
VOC Meters	64
Sampling Methods	64
Bioaerosol Sampling	64
Bulk Sampling	67
Data Acquisition Issues	70
Handling of Samples	70
Cross-contamination	70
Occupant Exposure	70
Risk/liability: Aggravating the Environment	71
Limitations of Investigations	71
CHAPTER 5: Guidelines Regarding Mold	75
Existing Guidelines: Scope and Overview	75
American Conference of Governmental Industrial Hygienists' Publications	77
The Environmental Protection Agency's Documents	78
New York City Department of Health Guidelines	78
The Institute of Inspection, Cleaning and Restoration's Certification Standards and Reference Guides	79
Indoor Air Quality Association Guidelines	79
Summaries of Guideline Documents	80
1999 ACGIH Bioaerosols: Assessment and Control	80
EPA Guidelines and Publications 2001 and 2002	81
NYCDOH Guidelines 2002	82
IICRC Standard S520	83
CHAPTER 6: Testing: What Does it Really Tell Us?	85
Background on Laboratories	85
Units of Measurement	86
Transitory Spores vs. Active Growth	87
Bioaerosols	88
Cultured Bioaerosol Samples	88
Method of Collection	89
Selection of Media	90
Growth Time Needed to Identify Species of Fungi	90
Understanding the Numbers – Culturable Samples	91
Countable Bioaerosol Samples	92
Method of Collection	93
Understanding the Numbers – Countable Samples	94
Bulk Samples	96
Interpretation of Results	96
Outdoor Bias	97
Characteristics of Particular Fungi	97
Inadequate Filtration and Hygiene of the HVAC System	98
Inadequate Interior Hygiene and Housekeeping	98
Specific Indoor Activities	98
Indigenous Contamination	99
Controversies in the Evaluation of Results	99
So, What Can We Find Out From Testing?	100
Different Species of Fungi: Basic Information for Understanding Test Results	100
CHAPTER 7: The Truth About Health Effects	105
What is Known?	106

Allergic Response	106
Disease Response	106
Toxic Response	107
What is not Known?	107
Perceived Health Effects	107
The Research that is Needed	108
CHAPTER 8: Clean? Remove? Or Treat?	109
Visible or Hidden Microbial Growth	110
Guidelines	111
American Conference of Governmental Industrial Hygienists	111
Environmental Protection Agency	111
New York City Department of Health	111
Institute of Inspection, Cleaning and Restoration	111
Occupant Susceptibility	116
Risk Exposure	116
Health Effects	116
Additional Exposures Created by Activities	117
Cleaning	118
Removal	119
Treatments	120
Ozone	120
Foggers	120
Encapsulation	121
Chemicals Added – Antimicrobials, Disinfectants, etc.	121
Material Safety Data Sheets (MSDSs)	123
Water Damage	125
Immediate Actions	125
Follow-up Actions	125
Environment Control During Activities	125
Industrial Hygiene Practices	126
Engineering Controls	126
Administrative Controls	127
Monitoring After Remediation	127
Political/legal Fallout	127
Financial Impacts	129
Short-term	129
Long-term	129
Conclusions	130
CHAPTER 9: Develop a Plan of Action	131
Build Occupants' Trust	131
Define the Cause of the Fungal Contamination	132
Define the Scope of Work	132
Identify Solutions/Corrections	133
Identify the Hazards	133
Identify the Extent of the Damage	134
Identify the Type of Project	134
Temporary Measures	135
Specifications	135
Use of Industry-accepted Codes, Standards, Guidelines and Methods.....	136
Identify Tasks	136
Identify Procedures or Methods	136
Identify Materials	136
Identify the Results Expected/Required.....	137
Fungal Growth Removal Procedures.....	137
Quality Control/Assurance	137
Visual Observations	137
Photographic Documentation	138
Worker Logs	138
Worker Observation	138
Equipment Hygiene	138
Monitoring	139
Monitoring at Daily or Specified Intervals	139
Pressure Differential Monitoring	139
Air Sampling	139
Surface Assessment/Sampling	139
Occupant Communication	140

Contingency Issues	140
Project Closure	141
Follow Up	141
CHAPTER 10: Containment Engineering	143
Purpose	143
Types and levels	143
Managed Areas	144
Design	146
Use	146
Risk Level Assessment	146
Location and Size	146
Airflow and Pressure	146
Traffic	147
Configurations	147
Construction	148
Materials	148
Walls and Ceiling	149
Supports	150
Doors	153
Floors	154
Chemicals Used	155
Airflow	155
Safety and Other Issues	158
Cross-contamination Control Procedures	159
Use of Engineered Containment Structures	159
Inspection/Quality Control	159
Entry and Exit Procedures	159
Emergency Procedures	161
Ill or hurt worker	161
Loss of pressure control	162
Managed Area Clean-up	163
Dismantling	164
Monitoring	164
Training/personnel	164
CHAPTER 11: Dry Out: Emergency Responses to Water Damage	167
Source of the Water Damage	167
Electrical Hazards	168
Clean-up Procedures	169
Immediate Clean-up of Non-contaminated Water Flooding.....	169
Initial Clean-up of Items	169
Secondary Clean-up	170
Caution: the Consequences of Not Properly Addressing Flooding	170
Methods of water removal	171
Wet-vacuuming	171
Extraction	171
Special Items	171
Artwork	171
Library Materials	172
Available Reference Works and Resources	173
CHAPTER 12: Material Removal	175
Guidelines	175
What Gets Removed?	176
Methods of Material Removal	177
Small Projects (Low Risk)	178
Medium Projects (Medium Risk)	180
Large projects (Elevated Risk)	183
Clearance Verification Criteria	186
Time delays/schedules	186
Equipment list – Minimal Requirements	186
CHAPTER 13: Cleaning	189
Cleaning Methods – the State of the Industry.....	189
Mechanical Cleaning Methods	190
Wet-vacuuming	190
Dry-vacuuming	191

Damp-wiping	191
Extraction	192
Steam Cleaning	192
Aspiration	192
Work Area Cleaning	192
General Cleaning	193
Electrostatic cloth sweepers	193
Furnace/air conditioner filters	193
Air purifiers	194
Chemicals Used in Cleaning Processes	194
Cleaning Agents	194
Antimicrobials (Biocides)	196
Contact Time	198
Chemical Introduction – a Contaminant or a Benefit?	198
Cleaning Methods for Specific Building Materials	200
Painted Surfaces - Interior	200
Painted Surfaces - Exterior	201
Covered Wall Surfaces	201
Gypsum Wallboard, Lath and Plaster	201
Concrete Block Walls, Concrete Floors and Other Concrete Surfaces	201
Roofs: Asphalt Shingles and Fiberglass Panels	202
Exterior Untreated Wood	202
Effectiveness, Studies, Proof	202
CHAPTER 14: Cleaning the Contents of a Building	205
What to Clean and What to “Toss”	205
Where to Clean	206
The Cleaning Process	206
Methods of Cleaning	207
Cleaning Methods for Specific Materials	209
Non-porous Surfaces	209
Tubs, showers, tiled floors and bathroom walls	209
Counters	209
Dishwashers	210
Refrigerators	210
Silverware, pots and pans, dishes, glasses, etc	210
Porous Surfaces/Objects	211
Clothes and cloth objects	211
Leather goods	211
Carpet and rugs	211
Mattresses	212
Upholstery	212
Draperies/window treatments	213
Wood furniture or cabinets	213
Laminate furniture or cabinets	214
Paper	214
Special Items	215
Photographs	215
Paintings	215
Metal sculptures	215
Effectiveness of Methods	215
CHAPTER 15: Disposal of Debris	217
Standards and Guidelines	217
Procedures for Removing Debris from a Building	217
Collection of Debris at the Work Location	217
Small and medium removal projects without full containment areas	217
Large removal projects with full containment areas	218
Moving Debris to Exterior of Building	219
Disposal of Debris	220
CHAPTER 16: Cleaning the HVAC System	221
Standards/guidelines	223
National Air Duct Cleaners Association - Assessment, Cleaning and Restoration (2005)	223
New York City Department of Health – Guidelines on Assessment and Remediation of Fungi in Indoor Environments (2002)	223
Environmental Protection Agency – A Brief Guide to Mold, Moisture and Your Home (2003), and Mold Remediation in Schools and Commercial Buildings (2001)	223

Sheet Metal and Air Conditioning Contractors' National Association - Duct Cleanliness for New Construction Guidelines (2000).....	223
North American Insulation Manufacturers Association - Cleaning Fibrous Glass Insulated Air Duct Systems:	
Recommended Practice (1993)	224
Assessing the HVAC System	224
Developing a Plan for Completing the Project	226
Building Usage Classification	226
HVAC Contamination Evaluation	229
Knowing the Bad Spots	229
Environmental Impact Assessment	230
Contaminant Control Strategies	230
Clearance Verification Criteria	232
Cleaning methods	232
Manual Methods	234
Power-assisted Methods	234
Steam-cleaning and Wet-cleaning Methods	235
Chemical Cleaning Methods	235
Applying Cleaning Methods to System Components	235
Air Handling Units	235
VAV and Mixing Boxes	236
Blowers	236
Coils	237
Coil (evaporator) Cleaners	238
Repair or Preservation of Components and Materials	238
Verification of Cleanliness	238
Communication	240
The Cleaning Process	241
Inspection/Verification of Equipment.....	241
Chemical Use in HVAC Systems – Selection, Use and Associated Liabilities	242
Monitoring	243
Health and Safety	244
Keeping the HVAC System Clean	244
The Effectiveness of Duct Cleaning.....	246
CHAPTER 17: Personal Protection	249
The Basic Concepts of Personal Protection	250
The Purpose of Personal Protective Equipment	250
When to Wear PPE	250
What PPE is Supposed to Do	250
Hazard Assessment	250
Rules for Respirators	251
Medical Evaluations	251
Fit Testing	252
Respirator Program	254
Selection of Respirators and Filters or Cartridges.....	254
Eye and Face Protection	255
Head Protection	255
Foot Protection	256
Body Protection – protective clothing	256
Heat Stress	257
Heat Cramps	257
Heat Exhaustion	258
Heatstroke	258
Preventing Heat-related “Illnesses”	258
Gloves (hand protection)	258
Decontamination Procedures	259
CHAPTER 18: Jobsite Safety	261
Electrical Safety Issues	262
Electrical Safety Standard	262
Lockout/Tagout	262
Fire and Life Safety	262
Fire Prevention	262
Life Safety	263
Confined Spaces	263
Oxygen Deficiency	263
Toxic Chemicals	263

Flammable or Explosive Atmospheres	264
Walking and Working Surfaces (slips, trips and falls)	264
Slip and Trip Hazards	264
Fall Hazards	264
Ladders	264
Scaffolds and Fall Protection	265
First aid/Cardiopulmonary Resuscitation	265
First Aid	265
Cardiopulmonary Resuscitation	265
Blood-borne Pathogens Standard	265
Hazard Communication	266
Multiple Employer Worksites	266
Ergonomics	266
Safe Lifting Techniques	266
Repetitive Motion Injuries	266
Damaged or Unoccupied Buildings – a special case	267
Unusual Life Safety Problems – Fire Safety	267
Security and Unauthorized Occupants	267
Unsound Walking and Working Surfaces	267
Other Hazards	267
Safety Tips for High-hazard Buildings	267
CHAPTER 19: Equipment	271
Filtration	271
Air Filtration Devices	271
Negative-air Machines	272
Standards	273
Test Criteria	273
HEPA Filters	273
Pre-filter and Secondary Filter	275
HEPA Vacuums	276
CHAPTER 20: Protect the Occupants	279
Cross-contamination	279
Investigative Activities	280
Containing Contamination During Remediation and Maintenance Activities	282
Traffic	284
New Contaminants	284
Hazard Communication	285
Material Safety Data Sheets	285
General Project Safety	286
CHAPTER 21: Monitoring	289
Different Types of Monitoring Activities	290
Pressure Mapping	290
Pressure Differential Monitoring	290
Particulate Monitoring	290
Air Sampling	291
Monitoring Temperature and Relative Humidity	291
Monitoring Concentrations of Chemicals	291
Clearance Verification Testing	292
CHAPTER 22: Interim Control Measures	293
Rule: Do NO harm!	293
Basic Concepts of Interim Occupant Protection	294
Isolation – Source Control	294
Controlling Dispersal Pathways	294
Environmental Control	295
Cleaning up Visible Growth	295
Follow-up	296
CHAPTER 23: How Clean is Clean?	297
Determining Baseline Conditions	297
Establishing “Cleanliness” Criteria	298
Parameters to be Measured	298
Standards/Guidelines vs. Changing Targets	299
Testing Methods	300

Aspects of Cleanliness	301
Health vs. Perceived Health vs. Occupant Expectations.....	301
Original Contaminants	301
Contaminants Added During Remediation and Cleaning	302
Clearance Verification Testing	302
Onsite Methods	303
Offsite Analysis	303
Time Delays and Schedules	303
CHAPTER 24: How to Keep it from Coming Back: Mold Growth Prevention	305
Understanding What Causes Fungi to Grow in Buildings.....	305
Moisture in Buildings	306
Moisture Entering the Building from the Outside.....	306
Catastrophic events	306
Construction and design issues	306
Component/equipment design and installation	312
Moisture Generated Inside a Building	314
Catastrophic events	314
Moisture from construction.....	315
Condensation and Humidity	315
Removing Moisture from a Building or Materials	316
Psychrometrics	316
The drying process	316
What determines the total amount of moisture that can be absorbed into the air?.....	318
What other things can affect the rate of drying?.....	318
What happens when the air cannot hold any more moisture?	319
Heating, Ventilation and Air Conditioning Systems and Moisture Control	320
Ensuring that Moisture is Absorbed into the Air from Surfaces and Objects	320
Drying Out the Air in a Building	321
Removing Moisture from a Building	321
Problems that Occur in HVAC System Operation and Moisture Control	322
Lack of dehumidification	322
Operational issues that reduce the dehumidification capabilities of systems	323
Codes/design Standards	324
Source Control of Contaminants	325
Reconstruction	325
Materials	325
Grout	325
Counters	326
Minimizing the Potential for Fungal Growth to Return.....	326
Good Design	326
Good Construction/Installation	326
Good Maintenance	326
CHAPTER 25: Pitfalls and Gray Areas	329
Keeping Up to Date	329
Team-building	330
Project Assessment	331
Deviations from Procedure	332
Client, Owner and Occupant: They Are Not Always The Same People	332
Owners	332
Occupants	333
Remediators' Interactions With Owners And Occupants.....	334
Coordination	334
Special Access Requirements	335
Site Access	335
Equipment Failures	336
The Supervision and Training of Workers	337
Documentation	338
Client-requested Services	338
Unreasonable Expectations Based on Misinformation	339
Good Communication: What You Said vs. What They Heard	341
Cleaning and Removal Methods – Level of Response Concerns	341
Protecting the Occupants When They Won't Protect Themselves	342
Difficult or Unreasonable Clients	343
CHAPTER 26: Where to go for Help	347
Associations and Organizations	347

Basic Guideline Documents	349
Biology	349
Building Codes	350
Chemicals	350
Cleaning	351
Duct Cleaning	352
Equipment – Field Testing for Cleanliness	353
Filtration	353
General Information	354
Health Effects of Mold	357
Laboratories	359
Moisture Control in Buildings	360
Safety	360
Sampling Methods and Techniques	360
Treatments (anti-microbial, encapsulation, etc.)	361
Ventilation	361
Water Restoration and Flood Response	361
Abbreviations/Acronyms	363
Glossary	367
Index	375

LIST OF FIGURES/TABLES

LIST OF FIGURES

FIGURE 2.1. Fungal mycelium of <i>Penicillium</i> sp.	12
FIGURE 2.2. A comparison of sizes	13
FIGURE 2.3. Sketches of morphology of bacteria	16
FIGURE 2.4. Normal particle size distribution in the atmosphere	20
FIGURE 3.1. A problem building	26
FIGURE 10.1. Airflow	146
FIGURE 10.2. Traffic	147
FIGURE 10.3. Full containment – option #1	148
FIGURE 10.4. Full containment – option #2	148
FIGURE 10.5. Flap door constructions	153
FIGURE 10.6. Typical exterior wall drywall removal containment	158
FIGURE 24.1. Psychrometric chart	317

LIST OF TABLES

TABLE 2.1. Comparison of asbestos and mold	9
TABLE 2.2. Differences and similarities between kingdoms	10
TABLE 3.1. Indoor Air Quality Association member disciplines	32
TABLE 3.2. Breakdown of tasks and possible provider	33
TABLE 4.1. Basic process of the investigation	42
TABLE 5.1. Guideline documents	76
TABLE 6.1. Detection limits for different collection times at a flow rate of 28.3 liters/minute	92
TABLE 6.2. Detection limits for different collection times at a flow rate of 15 liters/minute	95
TABLE 6.3. Genera of fungi commonly found in indoor sampling	101
TABLE 8.1. Comparison of guideline documents regarding cleaning or removal of fungal growth on materials	112
TABLE 8.2. National Fire Protection Association coding	124
TABLE 10.1. Levels of containment engineering needed and terminology used by different parties	145
